

Profession **Building construction worker** Results Summary MYSKILLS

Name:

Date of birth:

Test date: 12.02.2018

Test language: English

The test captures professional practical knowledge of the building construction worker, in six central areas of expertise. The testing is completed by asking questions relating to typical occupational situations, via a PC. The areas of expertise and situations are derived from the prescribed training regulations and curricula. The results follow:

Practical professional knowledge

●●●● High
●●●○ Average to high level

●●○○ Average
●○○○ Not provable, to average

○○○○ Not provable

Producing single-skin building structures

Carrying out simple construction work after receiving instructions. Building simple building structures from different materials and producing mortar mixtures. Using standard machines and appliances to do so.

Development of buildings

Setting up and securing the construction site. Developing connections to the building site following instructions and digging construction pits. Using the standard measuring instruments. Producing simple formwork and concrete and steel building parts.

Building structures with a supporting function

Constructing building structures with a supporting function following instructions. Using the correct bond and the right mortar mixture with different stone formats and wall thicknesses. Dividing stones with machines and erecting simple scaffolding.

Sealing and insulating buildings

Choosing suitable insulating materials, cutting them to size and installing them. Taking into account the behaviour of different building materials and creating seals following instructions.

Conducting simple finishing works

Conducting simple finishing works. Covering building parts with tiles, erecting drywall building structures, producing different types of plaster and processing screed.

Producing special structures and exposed masonry

Cannot be assessed

Creating double-skin masonry with exposed masonry with a decorative bond. Covering openings in the masonry with a lintel. Creating and renovating simple steps, edging and infills (timber frames).

Results Summary MYSKILLS

Notes on test content

The test consists of 100 questions on typical practical on-the-job situations. At least 20 questions are posed in a closed question format, per field of expertise. The test may take up to 4 hours. The test was developed by experts in various fields. The sub-division into various fields of expertise is oriented along the curricular content of the professional education and training, as well as occupational situations in practice. Practical job situations are represented via text, pictures and videos.

Notes on the interpretation of the results

The test covers practical professional knowledge, by posing questions regarding typical on-the-job situations and challenges.

This cannot be tested:

- Practical application and methodological competence
- Problem-solving skills
- Motivation, self-motivation and/or social skills
- German language skills
