

Profession Joiner Results Summary MYSKILLS

Name:

Date of birth:

Test date: 12.02.2018

Test language: English

The test covers the practical occupational knowledge of the professional cabinetmaker in six central areas of expertise. Testing is carried out by asking questions on a PC relating to typical occupational situations. The areas of expertise and situations are derived from the prescribed training regulations and curricula. The results follow:

Practical professional knowledge

●●●● High
●●●○ Average to high level

●●○○ Average
●○○○ Not provable, to average

○○○○ Not provable

Manufacture products with wood-working machinery

Select the required tools for various materials and machines. Saw, plane, mill and sand simple products. Set up, care for and maintain the machines.

Manufacture and assemble simple products in single-item production

Manufacture simple products according to the client's requirements. Prepare sketches, research required materials, and determine joints. Process and assemble wooden components.

Coat, lacquer and finish surfaces

Coat surfaces so that they are visually appealing to protect them from environmental damage. Veneer, stain, glaze and lacquer.

Assemble furniture

Disassemble furniture and dispose of it. Transport pre-manufactured furniture to the client, and install it professionally. Use simple hand-operated and small machinery for this procedure.

Assemble building components

Transport pre-manufactured building components, such as windows, to the building site, and assemble them. Use simple hand-operated and small machinery for this procedure.

Carry out maintenance and service operations

Cannot be assessed

Determine the type and scope of protective measures, and differentiate between chemical and construction-based wood protection. Care for, maintain and repair products made from wood and wood products.

Notes on test content

The test consists of 100 questions on typical practical on-the-job situations. At least 20 questions are posed in a closed question format, per field of expertise. The test may take up to 4 hours. The test was developed by experts in various fields. The sub-division into various fields of expertise is oriented along the curricular content of the professional education and training, as well as occupational situations in practice. Practical job situations are represented via text, pictures and videos.

Notes on the interpretation of the results

The test covers practical professional knowledge, by posing questions regarding typical on-the-job situations and challenges.

This cannot be tested:

- Practical application and methodological competence
- Problem-solving skills
- Motivation, self-motivation and/or social skills
- German language skills
